SERVICES DIRECTLY FROM THE MANUFACTURER

We guarantee a high quality of work which is based on our experience and continuously increasing expertise of our team consisting of both in-house and external workers.

We put a great emphasis on consultations with architects and engineers already during the preparation phase of projects and studies. From the beginning of the mutual project, we offer a wide variety of options to design a building (a combination of cladding and materials).

- Technical consultations, concepts of ventilated facade solutions, light surfaces and attachment constructions.
- Selection of the most suitable type and design of facade cladding and its attachment construction, incl. trimming elements, attics, paneling, door and window heads, profiles and ventilation grilles.
- Design of atypical building solutions
- Looking for possible cost reductions in relation to investor requests

Preparation of projects for specific facade types for both existing and new buildings

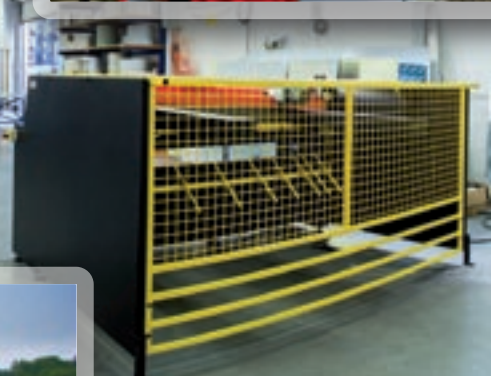

- Manufacturer documentation of individual construction elements for construction providers
- Application projects
- Assembly documentation
- Slicing plans and cost optimization

Advice on assembling ventilated facade systems, esp. for complex shape or aesthetically demanding constructions.

- Material samples before the complete supply
- Documents for subsequent material orders
- Slicing waste optimization
- Supply of formatted material as per request
- Technical instructions, technological procedures for assembly
- Assistance, control and advice on assembly
- Providing tensile tests on the construction site - 100% guarantee of correct function of the construction
